

Uni Brother OEM Chip Reset Operating Instruction V1.0

Contents

1. Feature.....	2
2. Brother Chip and JIG	2
3. Operating Procedure.....	2
4. Notice	3
5. Code Alerts and Meanings	4

1. Feature

Automatically identify models, reset to the exact model without changing the color, yield, and region.

2. Brother Chip and JIG

3. Operating Procedure

OEM Reset & OEM Check.

Make sure that the JIG is correctly aligned with the chip contacts.

Figure 1

Click in the main interface to scan chips.

Figure 2

After the chip is successfully scanned, you can enter into the final operation interface. Click to switch functions "RESET" "CHECK" "SCAN" and press the "Confirm" button on the JIG or Unismart device to carry out the chip operation.

	Brand	BROTHER	Series	RST-OEM
	Product	BROTHER-1	PCB	RST-BROTHER
			Type	Inkjet
	Color	BK	JIG	BR
	Region		yield	
	Apex credits		OEMcredits	8
	Chip type	OEM Chip	Data type	Genuine
	Chip status	Chip already ok/new	Ink/toner	
Chip Already OK		RESET		

Figure 3

- ◆ Using button to scan and check the chip information can only be realized in the main interface and final interface.
- ◆ the operation procedure above is for BROTHER-1 series and it can also be applied to other PCB boards.

4. Notice

- ◆ For Brother's chips, the chip models will not display on the Unismart device, and the OEM chip will only be reset to its original model.
- ◆ After resetting the OEM chip, if the ink in the cartridge is low or run out and WE STILL install the chip at this time, the printer will confirm the actual chip life by the ink detecting device on the cartridge and give "X" or "!" alerts. Meanwhile, the printer will rewrite the chip's data to related status.
- ◆ The chip of starter cartridges can only be used in specific printer. For example, after resetting the "LC201" chip and "LC203" chip of the starter cartridges, "LC201" chip can only be used in printer A (applied to starter cartridge 201), and "LC203" chip can only be used in printer B (applied to starter cartridge 203).
- ◆ However, both standard yield "LC201" chip and high yield "LC203" chip can be used in the standard cartridge.

Printer A

Printer B

- ◆ Differences between the starter cartridge and the standard cartridge. Please see the pictures below:

Starter Cartridge

Standard Cartridge

5. Code Alerts and Meanings

Coding Hinting	Meaning	Analysis
Chip Already OK	Chip Already OK	/
Operation failed	Operation failed	①The chip is damaged. ②The JIG's probe does not align the contactors on the chip. ③The JIG is placed in the opposite direction.
Operation succeeded	Operation succeeded	/
Chip not match	Chip doesn't match	The chip that needs to be reset cannot select the current model.
Data not match	Data not match	①The chip is installed and its data is rewritten by the printer. ②The detected chip model doesn't match with the selected model on the Unismart device.
Chip is locked	Chip is locked	/
Chip's useful life is over	Chip's useful life is over	/
Brand new chip	Brand new chip	/
No chip detected	No chip detected	/
Wrong JIG ID	Wrong JIG ID	/
Not found JIG	Not found JIG	/
